

Picea - Growing Guide

Growing Picea

Spruce

Burncoose only stocks a few species and varieties of Picea. Spruce trees tend to dislike our high rainfall levels in Cornwall in the garden and often do not grow as well as they should. We therefore offer a small selection of popular forms which have different uses in a garden context.

P. abies 'Rydal' grows up to 6-8ft which makes it a bit big for most rockeries although it can be a feature plant in a heather garden. It is best grown as a freestanding shrub where its extraordinarily odd and striking dark red new growth can be appreciated.
