Staphylea - Growing Guide

Growing Staphylea

Commonly known as ‘Bladder-Nuts’

Staphylea are superb bushy (sometimes multi-stemmed) deciduous shrubs that mature eventually into small trees. Species of Bladder-Nut originate from right across the northern hemisphere and are totally hardy. S. pinnata is European; S. colchica is from the Caucasus, S. holocarpa is Chinese, S. trifoliata and S. bolanderi are North American.

Staphylea coulombieri

Staphylea elegans

Staphylea holocarpa with seeds.

All species have dainty pinnate leaves with three, five or seven leaflets, an

As children we used to collect these ‘Chinese lanterns’ as we called them and pop them to extract the seeds. If stored over winter these germinate quickly in the spring. We have a detailed article on how to collect and store seeds if you are interested in learning more.

S. bumalda grows to 3-6ft (more in Cornwall) and has three leaflets.
