

Tubers - Care Guide

Tidying For Winter

1. Dahlia's, Canna's and Ginger's in frost prone areas need lifting to protect against winter wet and cold

2. Cut back top growth after first frost

3. Compost top growth

4. If in pots shake out, or if in the ground lift carefully with a garden fork

5. Shake off loose soil from around the tuber /rhizome

6. Check for snails and slugs and remove

7. Leave for a couple of weeks to dry in a warm dry area

8. And remember to label each plant

9. Once the soil around the tuber/rhizome has dried, place in a tray and cover with dry compost or shredded paper

10. Keep frost free but cool, (around 5 degrees) and check every so often for any mould
